FARQUHAR'S POT-GROWN STRAWBERRY PLANTS.

Strawberry
Suburban

All the varieties offered are perfect-flowering (bisexual) except where marked P. The latter are pistillate and require a row of a perfect-flowering sort planted every 8 or 10 feet to pollinize their blossoms.

These, if planted in July and August, produce a large crop the next Summer. Being grown in pots they may be shipped to a distance and planted with almost no interruption to their growth. The plants may be set in beds of three rows, one foot apart and one foot distant in the rows, with a space of two and one-half feet between the outside rows of adjoining beds left for a pathway. They may also be planted in single rows three feet apart and one foot apart in the rows.

NEW VARIETIES OF STRAWBERRIES.

Early Jersey Giant. A new, medium-early variety of great merit. The berries are of conical shape with pointed tips and are a bright crimson in color, with a delicious flavor and aroma.

FARQUHAR'S "SELECT" VARIETIES.

FIRST EARLY.

Alpha. A new, very early variety, producing strong, vigorous plants which are very productive. The fruit is of large size, attractive color and fine quality.

Excelsior. This is decidedly the best early strawberry and the earliest good strawberry. The fruit is of round conical form, glossy, dark-red color, and of mildly acid flavor.

Suburban. This berry is exceedingly productive, thriving well on light land, and is considered one of the best new sorts. Fruit large, conical, firm and of good flavor.

SECOND EARLY.

Glen Mary. Large, conical, bright red berries; fine flavor.

Senator Dunlap. Mr. Crawford, at the time of its introduction by him, said that he doubted if he had ever sent out a berry better than Senator Dunlap. It will keep in fair condition for several days on the vines after being ripe enough to pick. The fruit is large, rich and dark red clear to the centre, with a very rich flavor.

MEDIUM.

Barrymore. This fine Strawberry was awarded a Silver Medal by the Mass. Hort. Society in 1908, for its excellence. The plants are of strong growth and very productive. The conical shaped berries are of medium size and of a dark, glossy, crimson color; the flesh is a rich red and very juicy.

Big Joe. A magnificent new Strawberry of robust growth and very prolific. The berries are light crimson in color, unusually large and of fine quality.

POT-GROWN PLANTS of the above "Select" Varieties, from 2½-in. pots, well rooted, delivery in July and August. \$5.00 per 100; \$45.00 per 1000.

MEDIUM.

Golden Gate. A strong growing variety bearing rich crimson fruit without green tips and with quality similar to the *Marshall*. It blooms early and late, making it a good variety to pollinize the pistillate sorts.

Marshall. The fruit of this remarkable sort is of enormous size, or handsome, glossy dark crimson color, and of delicious flavor. It is one of the best midseason berries, either for private use or market. It is a vigorous grower and requires good soil and high cultivation. As it does not thrive in all soils, it should not be planted extensively until its adaptability is ascertained.

McAlpin. This new variety was originated in New Jersey and is considered by many growers to be one of the best of the newer introductions. The berries are a beautiful scarlet in color, very large and of rich luscious flavor. Very productive.

Nick Ohmer. Dark glossy red globular berries of superior flavor; fine for forcing.

LATE TO VERY LATE.

Chesapeake. The plants of the Chesapeake are large and vigorous, with rich dark green foliage. The fruit is of large size, deep red in color and of a rich aromatic flavor.

Commonwealth. This is the latest of all Strawberries; bearing large conical, deep crimson fruit, sweet and of quality equal to the well-known Bubach. Not only an extra large berry, but also very productive, of deep rich color, solid and quite juicy.

William Belt. An exceptionally fine berry. In quality it heads the list. The berries are as large, with some specimens larger than the Bubach. Its color is a glossy, deep red; late as Gandy.

32 VARIETIES OF ACKNOWLEDGED SUPREMACY.

For full crop next Summer
plant early.

Strawberry Marshall.

STANDARD VARIETIES.

FIRST EARLY.

Early Ozark. One of the most productive early varieties, producing large dark-red berries of rather acid flavor but very delicious. The plants are of vigorous growth with fine dark-green foliage.

St. Louis. A very productive, early variety, with large berries, similar to Excelsior. The plant is of vigorous growth and a good sort for the home garden.

SECOND EARLY.

Climax. This is an extremely popular new variety, immensely productive, the berries being slightly over medium size. Plant vigorous, healthy grower, of a peculiar shade of green that can be distinguished from other varieties.

Sample P. Excellent for either market or home use; prolific, large, firm and delicious.

LATE TO VERY LATE.

Gandy. This popular old variety is probably known by most berry growers. It is more largely grown than any other late variety. On sandy soils it is unproductive.

Orem. A very late fruiting variety of excellent quality, producing an abundance of large, bright red berries of delicious flavor. Excellent variety for marketing.

Rewastico. A very productive new variety. The plants are of vigorous growth with an abundance of dark green foliage and producing uniformly large berries. Color a rich cardinal red, penetrating to the centre.

Pot-Grown Plants of the above Standard varieties, from 2½-in. pots; well-rooted; delivery, July and August. \$4.00 per 100; \$38.00 per 1,000.

FALL-BEARING STRAWBERRIES.

** The fall-bearing varieties produce fruit at the same season as the ordinary Strawberries, but keep bearing until frost. To get the best results for a late crop, the blossoms must be carefully kept off until July, or the plants will completely exhaust themselves before fall. If the runners are kept cut during the Summer it will give additional vigor to the late crop.*

Progressive. This variety was introduced by Mr. Harlow Rockhill, and is considered by many growers to be one of the best perpetual bearing strawberries. The fruit is rich and sweet, a deep red inside and out; of good medium size and quite firm.

Superb. The fruit of this variety is medium to large and very attractive. The berries are a glossy dark red, aromatic and of excellent quality.

Pot Grown Plants of the above two varieties, \$7.00 per 100.

Brandywine. A large heart-shaped berry, perfect in form, bright red in color, firm flesh, red to the centre and of rich spicy flavor. A great cropper, especially on heavy soils, holds its fruit well up from the ground and generally succeeds everywhere.

King Edward. A very productive mid-season variety with large conical, glossy-red berries of delicious flavor. The plants are of strong, healthy growth with large dark-green foliage.

LILIES FOR FORCING.

The bulbs may be potted from August onward in a compost of equal parts turfy loam, leaf mold, rotted cow manure, and sand. It is best to start them in pots not exceeding twice their own diameter, in which they may remain until started eight inches or more. They should be transferred then to larger pots in which to bloom, exercising great care not to disturb the roots or break the soil from about them, and setting them considerably deeper in the larger pots. This method prevents the soil from becoming sour, and enables the roots forming at the base of the stem to become feeders, greatly increasing the number and size of the blossoms.

FARQUHAR'S HARDY PERENNIAL FLOWER SEEDS.

Hardy perennials are easily raised from seeds; they may be sown either in spring or during the early summer. The simplest method is to sow them in a frame, protecting the seedlings as they appear above ground from the sun. The soil should be kept evenly moist but not saturated. Transplant the seedlings once or twice if necessary to prevent crowding.

 ENGLISH AND JAPANESE GARDEN CONSTRUCTION.

Rustic work is now regarded as an indispensable element in natural garden composition.

Each situation calls for its own particular treatment, and we, therefore, aim to adapt our work to its environment. For this reason, we rarely build two Pergolas or Summer Houses alike.

We are prepared to furnish estimates on contemplated work. In our construction we use red cedar, white cedar, black Canadian spruce and laurel.
